

AMENDMENTS TO THE CLAIMS

1. (Cancelled)
2. **(Currently Amended)** A DNA enzyme, represented by the following Formula:

in the Formulae, A represents a catalytically active loop end, B represents an end of sequence of [[a]] nucleotide or [[an]] oligonucleotide which is complementary to substrate RNA, X represents the organic group selected from the group consisting of azobenzene, azobenzene derivatives, spiropyran, and stilbene, and R represents a hydrogen atom or an alkyl group having a carbon number of 1 to 4, wherein the azobenzene derivative is represented by the following Formulae (I), (II) or (III):

in the Formulae (I)-(III), R^1 , R^{11} , and R^{21} independently represent (a) a direct bond, (b) an unsubstituted or a halogen atom-, hydroxyl-, amino-, nitro-, or carboxyl-substituted alkylene group having a carbon number of 1 to 20, or (c) an unsubstituted or a halogen atom-, hydroxyl-, amino-, nitro-, or carboxyl-substituted alkenylene group having a carbon number of 2 to 20; Q represents (a) a direct bond, (b) an oxygen atom, (c) a $-(CH_2)_n-NH-CO-$ group, or (d) a $-(CH_2)_n-CO-NH-$ group, wherein $n = 1$ to 5 ; and R^2 to R^{10} , R^{12} to R^{20} , and R^{22} to R^{30} independently represent (a) an unsubstituted or a halogen atom-, hydroxyl-, amino-, nitro-, or carboxyl-substituted alkyl group or alkoxy group having a carbon number of 1 to 20, (b) an unsubstituted or a halogen atom-, hydroxyl-, amino-, nitro-, or carboxyl-substituted alkenyl group or alkynyl group having a carbon number of 2 to 20, (c) a hydroxyl group, (d) a halogen atom, (e) an amino group, (f) a nitro group, or (g) a carboxyl group; and at least one of R^2 to R^{10} , at least one of R^{12} to R^{20} , and at least one of R^{22} to R^{30} is substituted.

3. (Cancelled)

4. (Withdrawn) A method for controlling the activity of a DNA enzyme, characterized by comprising the step of applying light at specific wavelengths to the DNA enzyme including a nucleotide residue, to which any one organic group selected from the group consisting of azobenzene, spiropyran, stilbene, and derivatives thereof is bonded, and thereby, effecting reversible structural isomerization between a planar structure and a nonplanar structure of the organic group, so as to control the RNA cleavage activity of the DNA enzyme.

5. (Withdrawn) The method for controlling the activity of a DNA enzyme according to Claim 4, wherein the introduction position of the nucleotide residue is a 3'-side end of a catalytically active loop.

6. (Withdrawn) The method for controlling the activity of a DNA enzyme according to Claim 5, wherein the DNA enzyme is represented by the following Formula:

(in Formulae, A represents a catalytically active loop end, B represents nucleotide or oligonucleotide, X represents any one organic group selected from the group consisting of azobenzene, spiropyran, stilbene, and derivatives thereof, and R represents a hydrogen atom or an alkyl group having the carbon number of 1 to 4).

7. (Withdrawn) The method for controlling the activity of a DNA enzyme according to Claim 6, wherein X is represented by the following Formula (IV), (V), or (VI):

(in Formulae, R^{31} , R^{41} , and R^{51} represent independently a direct bond; an unsubstituted or a halogen atom-, hydroxyl-, amino-, nitro-, or carboxyl-substituted alkylene group having the carbon number of 1 to 20; or an unsubstituted or a halogen atom-, hydroxyl-, amino-, nitro-, or carboxyl-substituted alkenylene group having the carbon number of 2 to 20, Q represents a direct bond, an oxygen atom, a $-(CH_2)_n-NH-CO-$ group, or a $-(CH_2)_n-CO-NH-$ group, where $n = 1$ to 5 , R^{32} to R^{37} , R^{39} , R^{40} , R^{42} to R^{47} , R^{49} , R^{50} , R^{52} to R^{57} , R^{59} , and R^{60} represent independently an unsubstituted or a halogen atom-, hydroxyl-, amino-, nitro-, or carboxyl-substituted alkyl group or alkoxy group having the carbon number of 1 to 20; an unsubstituted or a halogen atom-, hydroxyl-, amino-, nitro-, or carboxyl-substituted alkenyl group or alkynyl group having the carbon number of 2 to 20; a hydroxyl group; a halogen atom; an amino group; a nitro group; or a carboxyl group, and R^{38} , R^{48} , and R^{58} represent independently an unsubstituted or a halogen atom-, hydroxyl-, amino-, nitro-, or carboxyl-substituted alkyl group or alkoxy group having the carbon number of 1 to 20; an unsubstituted or a halogen atom-, hydroxyl-, amino-, nitro-, or carboxyl-substituted alkenyl group or alkynyl group having the carbon number of 2 to 20; a hydroxyl group; or a halogen atom).

8. (Previously Presented) The DNA enzyme according to Claim 2, wherein Q is a $-(CH_2)_n-NH-CO-$ group and R^1 , R^{11} , and R^{21} are all direct bonds.

9. (Previously Presented) The DNA enzyme according to Claim 2, wherein Q is a $-(CH_2)_n-NH-CO-$ group, R^8 , R^{18} , and R^{28} are all amino groups, and R^1 , R^{11} , and R^{21} are all direct bonds.
